

VT Turnaware PDS

VT Turnaware PDS is a blind spot camera system that uses sophisticated video AI analytic software to detect anyone moving towards the vehicle and will warn the driver of their approach. Compliant with FORS and Direct Vision Standard.

VT Turnaware PDS

Using AI video analytic detection software **VT Turnaware PDS** analyses the camera's image to determine and senses whether a hazard is approaching the vehicle, recognising and ignoring any stationary objects or street furniture.

The driver is then warned with an audible alarm and any movement is highlighted on the screen within the side detection area in a highlighted border. **VT Turnaware** provides full coverage along the full length of the vehicle, unlike ultrasonic sensors.

FEATURES :

- Compliant with FORS and Direct Vision Standard
- High definition imagery
- Reduce collisions with vulnerable road users
- Warns drivers of hazards
- Reduces blind spots
- Can be integrated with VT products
- Suitable for retrofitting
- Can be fitted to any vehicle
- Definable detection below certain speeds to reduce false alarms
- Prevents accidents
