

# VT Sensorvision Drive

The VT Sensorvision Drive system is a forward-facing obstacle detection radar specifically developed for dumpers.

# VT Sensorvision Drive

VT Sensorvision Drive warns drivers of approaching hazards with a 'three-tier detection zone' audible and visual warning.

It is unique in the construction industry as its uses FMCW microwave detection - a flawless, accurate method of recognising an object in front of the vehicle.

Providing customers with hazard detection capability solves a problem faced by dumper operators across the country - having no way of seeing beyond their heaped load.

By using a radar that detects with perfect accuracy there's little risk of colliding with objects, vehicles or workers on site.

## FEATURES :

- FMCW Technology for accurate and reliable detection
- Programmable detection zones customised to application
- Plug-and-play operation, ensuring simple installation
- Optimised for portability, allowing it to be easily detached and reinstalled on different machines
- Unique to VT
- Intelligent detection of closing distances to prevent false alarms
- Driver alert system
- Can be retrofitted to any type of vehicle
- Updated 77ghz radar technology
