

VT Lightboard

VT Lightboard

VT Lightboard improves awareness, warns drivers of workers in the road and helps to reduce incidents.

Offering a leaner chic design our lightboard is designed with SMD's, has fully customisable text including **“Caution workers at rear”**, has various effects such as scrolling and flashing and can be put in any orientation; portrait or landscape.

The lightboard text can also be any colour you choose including yellow, white and green.

The VT Lightboard is much brighter to the naked eye compared to what it looks like on camera, making it visible from a distance both in daylight and in darkness.

FEATURES:

- Grabs attention - Increases the awareness of your vehicle and workers by using high intensity warning messages which flash or scroll on the back of the vehicle.
- Warn drivers and prevent accidents - The lightboard warns drivers of workers in the road, making sure they travel around the vehicle with caution to avoid an incident.
- Increases visibility - The SMD's flash in bright colours, making sure the message is easily seen.
- Robust - Tough and durable. 540mm x 160mm x 40mm size allows it to be fitted to all types of vehicles.
